Smart Agile for Smart Government

Today's federal IT initiatives are characterized by a unique set of goals and pressures. In particular, government software development projects demand higher-benchmarks for timely delivery, complex integration, and stakeholder collaboration. Such environments require an organization with the ability and experience to meet those benchmarks while remaining cost-effective and quality driven.

WTS showcases exactly this ability and experience through the prism of the Agile software process.

By adhering to Agile philosophies—in particular iterative development, collaboration, and adaptability we are able to deliver systems under any circumstances for even the most demanding clients. Our consultants are trained and certified in state-of-the-art Agile techniques and support tools. In addition, we have the experience to adopt and customize Agile principles so they comply with overarching processes, policies and frameworks that are often required by clients.

WTS AGILE CLIENT-TAILORED SCRUM PROCESS

Accompanying our Agile-centric processes is unparalleled breadth and depth of technical capabilities to ensure on-time deployment of defect-free systems. We marry client-defined technologies, systems and interfaces with industry-defined standards, guidelines and best practices to ensure that we exceed client expectations for production software.
